Completed on	Friday, 4 September 2026, 2:44 PM
Time taken	12 mins 1 sec
Grade	10.00 out of 10.00 (100%)

Question 1

Correct

Mark 1.00 out of 1.00

From the following tables write a SQL query to find those orders where the order amount exists between 500 and 2000. Return ord_no, purch_amt, cust_name, city.

Sample table: customer

customer_id	cust_name	city	grade	salesman_id
3002	Nick Rimando	New York	100	5001
3007	Brad Davis	New York	200	5001
3005	Graham Zusi	California	200	5002
3008	Julian Green	London	300	5002
3004	Fabian Johnson	Paris	300	5006
3009	Geoff Cameron	Berlin	100	5003
3003	Jozy Altidor	Moscow	200	5007
3001	Brad Guzan	London		5005

Sample table: orders

ord_no	purch_amt	ord_date	customer_id	salesman_id
70001	150.5	2012-10-05	3005	5002
70009	270.65	2012-09-10	3001	5005
70002	65.26	2012-10-05	3002	5001
70004	110.5	2012-08-17	3009	5003
70007	948.5	2012-09-10	3005	5002
70005	2400.6	2012-07-27	3007	5001
70008	5760	2012-09-10	3002	5001
70010	1983.43	2012-10-10	3004	5006
70003	2480.4	2012-10-10	3009	5003
70012	250.45	2012-06-27	3008	5002
70011	75.29	2012-08-17	3003	5007
70013	3045.6	2012-04-25	3002	5001

For example:

Result			
ord_no	purch_amt	cust_name	city
70007	948.5	Graham Zusi	California
70010	1983.43	Fabian Johns	Paris

Answer: (penalty regime: 0 %)

```

1 | SELECT o.ord_no, o.purch_amt, c.cust_name, c.city
2 | FROM orders o
3 | JOIN customer c
4 | ON o.customer_id = c.customer_id
5 | WHERE o.purch_amt BETWEEN 500 AND 2000;
```

	Expected				Got				
✓	ord_no	purch_amt	cust_name	city	ord_no	purch_amt	cust_name	city	✓
	-----	-----	-----	----	-----	-----	-----	----	
	-----				-----				
	70007	948.5	Graham Zusi		70007	948.5	Graham Zusi		
	California				California				
	70010	1983.43	Fabian Johns	Paris	70010	1983.43	Fabian Johns	Paris	
✓	ord_no	purch_amt	cust_name	city	ord_no	purch_amt	cust_name	city	✓
	-----	-----	-----	----	-----	-----	-----	----	
	-----				-----				
	70007	948.5	Graham Zusi		70007	948.5	Graham Zusi

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question **2**

Correct

Mark 1.00 out of 1.00

Write the SQL query that achieves the selection of the first name from the "patients" table (aliased as "patient_name") and all columns from the "appointments" table (aliased as "a"), with an inner join on the "patient_id" column.

PATIENTS TABLE:

ATTRIBUTES - patient_id, first_name, last_name, date_of_birth, admission_date, discharge_date, doctor_id

patient_id	first_name	last_name	date_of_birth	admission_date	discharge_date	doctor_id
1	Alice	Williams	1980-05-12	2024-01-10	NULL	1
2	Bob	Miller	1995-08-23	2024-02-15	2024-03-01	2
3	Charlie	Davis	1972-11-30	2024-03-10	NULL	3

APPOINTMENTS TABLE:

ATTRIBUTES - appointment_id, patient_id, doctor_id, appointment_date

appointment_id	patient_id	doctor_id	appointment_date
1	1	1	2024-01-05 10:00:00
2	2	2	2024-02-20 14:30:00
3	3	3	2024-03-15 09:15:00

For example:

Result				
patient_name	appointment_id	patient_id	doctor_id	appointment_date
Alice	1	1	1	2024-01-05 10:00:00
Bob	2	2	2	2024-02-20 14:30:00
Charlie	3	3	3	2024-03-15 09:15:00

Answer: (penalty regime: 0 %)

```

1 | SELECT p.first_name AS patient_name, a.*
2 | FROM patients p
3 | INNER JOIN appointments a
4 | ON p.patient_id = a.patient_id;
```

	Expected				Got				
✓	patient_name doctor_id ----- -----	appointment_id appointment_date ----- -----	patient_id ----- -----	 ----- -----	patient_name doctor_id ----- -----	appointment_id appointment_date ----- -----	patient_id ----- -----	 ----- -----	✓

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 3

Correct

Mark 1.00 out of 1.00

Write the SQL query that achieves the selection of the "name" column from the "salesman" table (aliased as "s"), the "cust_name," "city," "grade," and "salesman_id" columns from the "customer" table (aliased as "c"), with a left join on the "salesman_id" column and a condition filtering for salesman_id values that have more than one associated customer.

Customer Table: (customer_id, cust_name, city, grade, salesman_id)

Salesman Table: (salesman_id, name, city, commission)

For example:

Result				
name	cust_name	city	grade	salesman_id
-----	-----	-----	-----	-----
Bob Emily	Nick Rimando	Chennai	100	5001
Bob Emily	Brad Davis	New York	200	5001
Nail Knite	Graham Zusi	California	200	5002
Nail Knite	Julian Green	London	300	5002

Answer: (penalty regime: 0 %)

```

1 SELECT s.name, c.cust_name, c.city, c.grade, c.salesman_id
2 FROM salesman s
3 LEFT JOIN customer c
4 ON s.salesman_id = c.salesman_id
5 WHERE s.salesman_id IN (
6     SELECT salesman_id
7     FROM customer
8     GROUP BY salesman_id
9     HAVING COUNT(*) > 1
10 );

```

	Expected				Got				
✓	name	cust_name	city	grade	name	cust_name	city	grade	✓
	salesman_id				salesman_id				
	-----	-----	-----	-----	-----	-----	-----	-----	
	James Hoog	Nick Rimando	Chennai	100	James Hoog	Nick Rimando	Chennai	100	
	5001				5001				
	James Hoog	Brad Davis	New York	200	James Hoog	Brad Davis	New York	200	
	5001				5001

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 4

Correct

Mark 1.00 out of 1.00

Write the SQL query that achieves the selection of all columns from the "customer" table (aliased as "c"), with a left join on the "salesman_id" column and a condition filtering for salesman with the name 'Mc Lyon'.

Customer Table: (customer_id, cust_name, city, grade, salesman_id)

Salesman Table: (salesman_id, name, city, commission)

For example:

Result				
customer_id	cust_name	city	grade	salesman_id
-----	-----	-----	-----	-----
3004	Fabian Johns	Paris	300	5006

Answer: (penalty regime: 0 %)

```
1 SELECT c.*
2 FROM customer c
3 LEFT JOIN salesman s
4 ON c.salesman_id = s.salesman_id
5 WHERE s.name = 'Mc Lyon';
```

	Expected				Got				
✓	customer_id	cust_name	city	grade	customer_id	cust_name	city	grade	✓
	salesman_id				salesman_id				
	-----	-----	-----	-----	-----	-----	-----	-----	
	3004	Fabian Johns	Paris	300	3004	Fabian Johns	Paris	300	
	5006				5006				
✓	customer_id	cust_name	city	grade	customer_id	cust_name	city	grade	✓
	salesman_id				salesman_id				
	-----	-----	-----	-----	-----	-----	-----	-----	
	3004	Fabian Johns	Paris	300	3004	Fabian Johns	Paris	300	
	5006				5006				

	Expected				Got				
✓	customer_id	cust_name	city	grade	customer_id	cust_name	city	grade	✓
	salesman_id				salesman_id				
	-----	-----	-----	----	-----	-----	-----	----	
	-----	-----			-----	-----			
	3004	Fabian Johns	Paris	300	3004	Fabian Johns	Paris	300	
	5006				5006				

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 5

Correct

Mark 1.00 out of 1.00

Write the SQL query that achieves the selection of all columns from the "patients" table, with an inner join on the "doctor_id" column, and includes a condition filtering for patients whose doctors have the first name 'John' and last name 'Smith'.

PATIENTS TABLE:

name	type
patient_id	INT
first_name	VARCHAR(50)
last_name	VARCHAR(50)
date_of_birth	DATE
admission_date	DATE
discharge_date	DATE
doctor_id	INT

DOCTORS TABLE:

name	type
doctor_id	INT
first_name	VARCHAR(50)
last_name	VARCHAR(50)
specialization	VARCHAR(100)

For example:

Result						
patient_id	first_name	last_name	date_of_birth	admission_date	discharge_date	doctor_id
1	Alice	Williams	1980-05-12	2024-01-10		1

Answer: (penalty regime: 0 %)

```
1 SELECT p.*
2 FROM patients p
3 INNER JOIN doctors d
4 ON p.doctor_id = d.doctor_id
5 WHERE d.first_name = 'John'
6 AND d.last_name = 'Smith';
```

	Expected				Got				
✓	patient_id	first_name	last_name		patient_id	first_name	last_name		✓
	date_of_birth	admission_date	discharge_date		date_of_birth	admission_date	discharge_date		
	doctor_id				doctor_id				
	-----	-----	-----		-----	-----	-----		
	-----	-----	-----		-----	-----	-----		
	1	Alice	Williams	1980-	1	Alice	Williams	1980-	
	05-12	2024-01-10	1		05-12	2024-01-10	1		
✓	patient_id	first_name	last_name		patient_id	first_name	last_name		✓
	date_of_birth	admission_date	discharge_date		date_of_birth	admission_date	discharge_date		
	doctor_id				doctor_id				
	-----	-----	-----		-----	-----	-----		
	-----	-----	-----		-----	-----	-----		
	1	Alice	Williams	1980-	1	Alice	Williams	1980-	
	05-12	2024-01-10	1		05-12	2024-01-10	1		
✓	patient_id	first_name	last_name		patient_id	first_name	last_name		✓
	date_of_birth	admission_date	discharge_date		date_of_birth	admission_date	discharge_date		
	doctor_id				doctor_id				
	-----	-----	-----		-----	-----	-----

	1	Alice	Williams	1980-	1	Alice	Williams	1980-	
	05-12	2024-01-10	1		05-12	2024-01-10	1		

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 6

Correct

Mark 1.00 out of 1.00

write a SQL query to find the salesperson and customer who reside in the same city. Return Salesman, cust_name and city.

Sample table: salesman

salesman_id	name	city	commission
5001	James Hoog	New York	0.15
5002	Nail Knite	Paris	0.13
5005	Pit Alex	London	0.11
5006	Mc Lyon	Paris	0.14
5007	Paul Adam	Rome	0.13
5003	Lauson Hen	San Jose	0.12

Sample table: customer

customer_id	cust_name	city	grade	salesman_id
3002	Nick Rimando	New York	100	5001
3007	Brad Davis	New York	200	5001
3005	Graham Zusi	California	200	5002
3008	Julian Green	London	300	5002
3004	Fabian Johnson	Paris	300	5006
3009	Geoff Cameron	Berlin	100	5003
3003	Jozy Altidor	Moscow	200	5007
3001	Brad Guzan	London		5005

For example:

Result		
Salesman	cust_name	city
Bob Emily	Brad Davis	New York
Nail Knite	Fabian Johns	Paris
Pit Alex	Brad Guzan	London
Pit Alex	Julian Green	London
Mc Lyon	Fabian Johns	Paris

Answer: (penalty regime: 0 %)

```

1 | SELECT s.name AS Salesman, c.cust_name, s.city
2 | FROM salesman s
3 | JOIN customer c
4 | ON s.city = c.city;
```

	Expected			Got			
✓	Salesman	cust_name	city	Salesman	cust_name	city	✓
	-----	-----	-----	-----	-----	-----	
	James Hoog	Brad Davis	New York	James Hoog	Brad Davis	New York	
	Nail Knite	Fabian Johns	Paris	Nail Knite	Fabian Johns	Paris

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 7

Correct

Mark 1.00 out of 1.00

From the following tables write a SQL query to display the customer name, customer city, grade, salesman, salesman city. The results should be sorted by ascending customer_id.

Sample table: customer

customer_id	cust_name	city	grade	salesman_id
3002	Nick Rimando	New York	100	5001
3007	Brad Davis	New York	200	5001
3005	Graham Zusi	California	200	5002
3008	Julian Green	London	300	5002
3004	Fabian Johnson	Paris	300	5006
3009	Geoff Cameron	Berlin	100	5003
3003	Jozy Altidor	Moscow	200	5007
3001	Brad Guzan	London		5005

Sample table: salesman

salesman_id	name	city	commission
5001	James Hoog	New York	0.15
5002	Nail Knite	Paris	0.13
5005	Pit Alex	London	0.11
5006	Mc Lyon	Paris	0.14
5007	Paul Adam	Rome	0.13
5003	Lauson Hen	San Jose	0.12

For example:

Result				
cust_name	city	grade	Salesman	city
Brad Guzan	London	100	Pit Alex	London
Nick Rimando	Chennai	100	Bob Emily	New York
Jozy Altidore	Moscow	200	Paul Adam	Rome
Fabian Johns	Paris	300	Mc Lyon	Paris
Graham Zusi	California	200	Nail Knite	Paris
Brad Davis	New York	200	Bob Emily	New York
Julian Green	London	300	Nail Knite	Paris
Geoff Cameron	Berlin	100	Lauson Hen	San Jose

Answer: (penalty regime: 0 %)

```

1 | SELECT c.cust_name, c.city, c.grade, s.name AS Salesman, s.city AS city
2 | FROM customer c
3 | JOIN salesman s
4 | ON c.salesman_id = s.salesman_id
5 | ORDER BY c.customer_id ASC;
```

	Expected				Got

Passed all tests! ✓

Correct

Marks for this submission: 1.00/1.00.

Question 8

Correct

Mark 1.00 out of 1.00

From the following tables write a SQL query to find the salesperson(s) and the customer(s) he represents. Return Customer Name, city, Salesman, commission.

Sample table: customer

customer_id	cust_name	city	grade	salesman_id
3002	Nick Rimando	New York	100	5001
3007	Brad Davis	New York	200	5001
3005	Graham Zusi	California	200	5002
3008	Julian Green	London	300	5002
3004	Fabian Johnson	Paris	300	5006
3009	Geoff Cameron	Berlin	100	5003
3003	Jozy Altidor	Moscow	200	5007
3001	Brad Guzan	London		5005

Sample table: salesman

salesman_id	name	city	commission
5001	James Hoog	New York	0.15
5002	Nail Knite	Paris	0.13
5005	Pit Alex	London	0.11
5006	Mc Lyon	Paris	0.14
5007	Paul Adam	Rome	0.13
5003	Lauson Hen	San Jose	0.12

For example:

Result			
Customer Name	city	Salesman	commission
Nick Rimando	Chennai	Bob Emily	0.15
Graham Zusi	California	Nail Knite	0.13
Brad Guzan	London	Pit Alex	0.11
Fabian Johns	Paris	Mc Lyon	0.14
Brad Davis	New York	Bob Emily	0.15
Geoff Cameron	Berlin	Lauson Hen	0.12
Julian Green	London	Nail Knite	0.13
Jozy Altidore	Moscow	Paul Adam	0.13

Answer: (penalty regime: 0 %)

```

1 SELECT c.cust_name AS "Customer Name",
2       c.city,
3       s.name AS Salesman,
4       s.commission
5 FROM customer c
6 JOIN salesman s
7 ON c.salesman_id = s.salesman_id;
```

	Expected				Got				
✓	Customer Name commission	city	Salesman		Customer Name commission	city	Salesman		✓
	-----	-----	-----	-----	-----	-----	-----	-----	
	Nick Rimando	Chennai	James Hoog	0.15	Nick Rimando	Chennai	James Hoog	0.15

Question 9

Correct

Mark 1.00 out of 1.00

From the following tables write a SQL query to locate those salespeople who do not live in the same city where their customers live and have received a commission of more than 12% from the company. Return Customer Name, customer city, Salesman, salesman city, commission.

Sample table: customer

customer_id	cust_name	city	grade	salesman_id
3002	Nick Rimando	New York	100	5001
3007	Brad Davis	New York	200	5001
3005	Graham Zusi	California	200	5002
3008	Julian Green	London	300	5002
3004	Fabian Johnson	Paris	300	5006
3009	Geoff Cameron	Berlin	100	5003
3003	Jozy Altidor	Moscow	200	5007
3001	Brad Guzan	London		5005

Sample table: salesman

salesman_id	name	city	commission
5001	James Hoog	New York	0.15
5002	Nail Knite	Paris	0.13
5005	Pit Alex	London	0.11
5006	Mc Lyon	Paris	0.14
5007	Paul Adam	Rome	0.13
5003	Lauson Hen	San Jose	0.12

For example:

Result				
Customer Name	city	Salesman	city	commission
Nick Rimando	Chennai	Bob Emily	New York	0.15
Graham Zusi	California	Nail Knite	Paris	0.13
Julian Green	London	Nail Knite	Paris	0.13
Jozy Altidore	Moscow	Paul Adam	Rome	0.13

Answer: (penalty regime: 0 %)

```

1 | SELECT c.cust_name AS "Customer Name",
2 |       c.city AS city,
3 |       s.name AS Salesman,
4 |       s.city AS city,
5 |       s.commission
6 | FROM customer c
7 | JOIN salesman s
8 | ON c.salesman_id = s.salesman_id
9 | WHERE c.city <> s.city
10 | AND s.commission > 0.12;
```

Correct

Marks for this submission: 1.00/1.00.

Question 10

Correct

Mark 1.00 out of 1.00

Write the SQL query that achieves the selection of the first name from the "patients" table and all columns from the "surgeries" table, with an inner join on the "patient_id" column. Include conditions to filter for patients discharged between '2024-03-01' and '2024-03-31' but not admitted during the same period.

PATIENTS TABLE:

name	type
patient_id	INT
first_name	VARCHAR(50)
last_name	VARCHAR(50)
date_of_birth	DATE
admission_date	DATE
discharge_date	DATE
doctor_id	INT

SURGERIES TABLE:

name	type
surgery_id	INT
patient_id	INT
surgeon_id	INT
surgery_date	DATE

For example:

Result				
first_name	surgery_id	patient_id	surgeon_id	surgery_date
Bob	2	2	2	2024-02-28

Answer: (penalty regime: 0 %)

```

1 | SELECT p.first_name, s.*
2 | FROM patients p
3 | INNER JOIN surgeries s
4 | ON p.patient_id = s.patient_id
5 | WHERE p.discharge_date BETWEEN '2024-03-01' AND '2024-03-31'
6 | AND p.admission_date NOT BETWEEN '2024-03-01' AND '2024-03-31';

```

	Expected				Got				
✓	first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		✓
✓	first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		✓
✓	first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		first_name surgeon_id ----- ----- Bob 2024-02-28	surgery_id surgery_date ----- ----- 2 2	patient_id 2 2		✓

Passed all tests! ✓

Correct
